

Transport Issue List

Latest issues:

1. When finishing the job through the alert message under 'FINISH', we would like the driver to automatically finish the job.

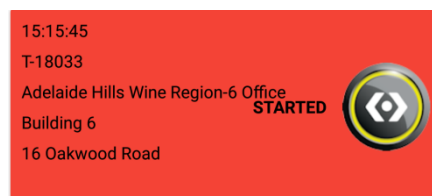

2. There is no way to re-start a job from the scanner that has been finished. You will only be able to 'unfinish' the job from the back end.

3. After the job has been started, it will be displayed **red** in the job list. We only need the **load icon** to change colour as the row/unit app does.

allocated- yellow

started/active- green

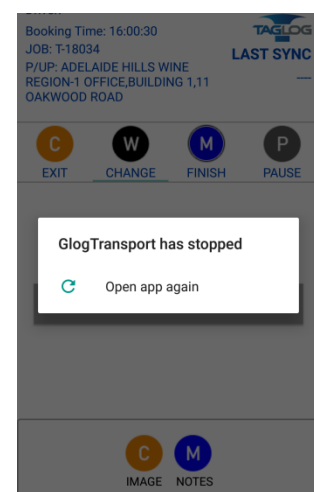

finished- red

4. After finishing the job on the scanner, the job will be displayed at '**closed**' on the back end.

TDS-18001	Grape Logistics	A J Transport	James Trent	Isuzu	Grape Transport	Click here to view job details	2018-12-19 17:25:04	closed	<div><div><div></div><div></div></div><div><div>Finish Job</div><div>Unfinish Job</div></div><div><div>Complete Job</div><div>Archive Job</div></div></div>
-----------	-----------------	---------------	-------------	-------	-----------------	--	---------------------	--------	---

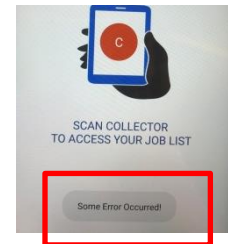

5. Under the 'CHANGE' page, when finishing the current driver and trying to start a new one, this message will be displayed before the app crashes.

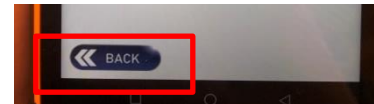

Older issues:

~~1. When trying to enter the transport app with a driver that is not allocated to any jobs, the screen will display 'Some Error Occurred' instead of displaying 'Invalid Driver'.~~

After scanning an invalid driver, the screen will not display anything.
Please change to 'You are an invalid driver'.

~~2. The 'Back' button on the job list does not work.~~

~~3. While working on a transport job, the 4 modules 'EXIT'/'CHANGE'/'FINISH'/'PAUSE' as shown in the example below, will~~

~~display the incorrect icon above 'EXIT'/'CHANGE'/'FINISH'. We would also like to change 'EXIT' to 'JOB'. For the icons, we want:~~

~~JOB: J~~

~~CHANGE: C~~

~~FINISH: F~~

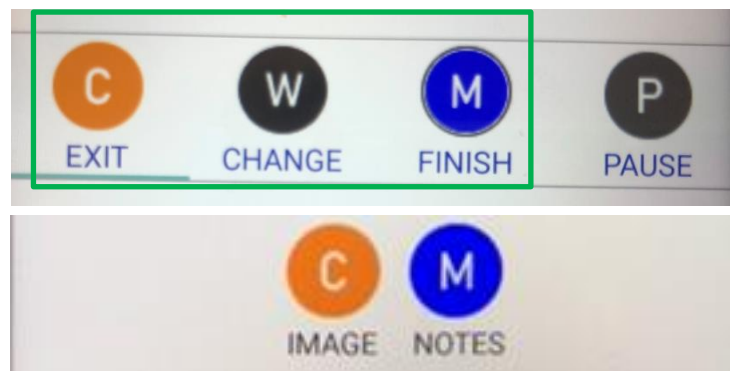

~~PAUSE: P~~

~~And also change the two modules at the bottom of the screen.~~

~~IMAGE: I~~

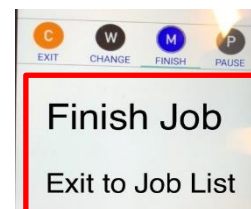

~~NOTES: N~~

(PLEASE REFER TO MARTHA'S INSTRUCTIONS)

~~4. Please add a 'Finish Job' and an 'Exit to Job List' feature and the 'FINISH' page.~~

~~Please have it displayed the same as the scanning app.~~

~~5. While working on a transport job, when you tap on 'FINISH' or 'PAUSE' the screen will slide across as it is meant to, but you have to tap 'FINISH' or 'PAUSE' twice before you are given the option to finish/pause the job.~~

~~6. The 'Booking Time' says 'Bookibg'.~~

~~7. While working on a transport job, there is no way to exit the job to go back to the job list except for the back button built in to the scanner.~~

~~8. While working on a transport job, if you wish to change the driver, after tapping 'CHANGE', scanning the driver card, then tapping 'LEAVE', a message will be displayed saying 'Driver Changed' although their name is still displayed in the top left of the screen.~~

~~When scanning a new driver and tapping 'START', a message will be displayed saying 'An error occurred, please try again'.~~

~~9. While working on the transport app, after finishing the job, there is no indication to show that the job has been finished. Instead a message will be displayed saying 'Some error occurred'.~~

~~The job will then disappear from the job list on the scanner and the finished job will be displayed as 'Closed' while on the job list on the back end.~~
